

## Model 98

The Edward Segal, Inc. **Model 98** is a semi-automatic grommet machine capable of handling heavy-duty industrial fabrics. The machine is designed to increase productivity, reduce costs, and safeguard machine operators. When the machine is actuated by the electro-air foot switch, a grommet is automatically fed from the raceway, the hole is punched and the grommet attached. All this occurs in one single cycle. A washer, if used, is hand loaded.

### Features

- Advanced cutting technology to punch a hole in heavy-duty industrial fabrics, including Nylon and Kevlar
- Flywheel powered to ensure consistent settings
- Compensator to allow variance in material thickness of up to 0.125"
- Available for grommet and washer sizes No. 00 to No. 4

Accuracy, efficiency, and reliability are vital to your requirements. You can count on Edward Segal, Inc. for eyelet and grommet attaching machine expertise to help you meet these valuable goals.

**Sample Settings:** Send us samples of your material, in ready to be grommeted condition, along with your grommet and washer requirements and we will be pleased to return your sample settings for your approval with our formal quotation.

### Specifications

- **Floor space:** 36" X 36"
- **Work height:** 38" with optional B2424 Machine Stand
- **Net Weight:** 475lbs net/600 lbs. crated
- **Frame:** Cast Iron: dim. Height: 24 ½", length: 23", width: 12"
- **Throat depth:** 7 ½"
- **Electrical:** 115 VAC, 60 hz. Single phase
- **Pneumatic:** Electro-Air foot trip that requires 50-60 psi (.2 cfm) of compressed air
- Safety ring guard or dual palm buttons
