

Handheld Tool

Powerset 2

The **Powerset 2** is an innovative power tool that combines the force of an impact driver with the engineering of grommet and snap fastener machines. A specially designed C-Frame mounts directly to the impact driver and allows the Powerset 2 to be used much like any type of setting machine. Simply load the product onto the tooling and then engage the trigger and the driver will start the cycle. When the driver reaches the bottom of the stroke, simply switch the tool to reverse to retract the ram.

Fabricators and installers will quickly benefit from the features of the Powerset 2. Portability is the primary feature, as no other powered tool offers the ability to bring these capabilities right to the job site. Whether it is for a new installation or repair, every installer will benefit from the capabilities of this power tool.

The Edward Segal Inc. Powerset 2 is sold as a complete package with the Impact Driver and C-Frame. A single battery and charger is included with the package. Tooling for Snap Fasteners and Self-Piercing Grommets in standard industry sizes are generally kept in-stock and sold separately. Custom tooling can be made for many different size fasteners (eyelets, grommets, and snap fasteners).

The Powerset 2 may be the most innovative fastening tool this industry has seen in decades. Order yours today by contacting Edward Segal Inc. directly as shown below.

Optional Bench Mount
